

信息可视化 实践课03

1

JS的基本语法

1. W3school: <https://www.w3school.com.cn/js/index.asp>
2. Runoob: <https://www.runoob.com/js/js-tutorial.html>

W3school

RUNOOB.COM

练习1:

1. 请编写冒泡排序代码，实现对七天数据的升序排序，并在柱状图中正确显示
2. 练习用代码下载: <https://byshawn.github.io/infovis/datavis2026/03-Bar.zip>

2

数据处理及显示

练习2

1. 载入监测点位置及空气质量数据
2. 将各空气质量（AQI）值映射到 $[0, 100]$ 之间
3. 处理后的数据使用EChart散点图显示，**AQI的值用散点大小体现**

注：

文件载入方法见：<https://byshaw.n.github.io/infovis/datavis2026/02-DataVis-Practice.pdf>

空气质量数据见：<https://byshaw.n.github.io/infovis/datavis2026/03-AQIData.csv>

散点图参考代码见：<https://byshaw.n.github.io/infovis/datavis2026/03-ScatterPlot.zip>

3

载入图片并获取 颜色数据

载入图片

```
var img = new Image();  
img.src = 'images/01.jpg';  
var context = document.getElementById('myCanvas').getContext('2d');  
context.drawImage(img, 0, 0);
```

练习3:

1. 在网页中绘制两张图片：05.jpg和06.jpg
2. 在浏览器控制台输出05.jpg图片某个像素点的颜色值
3. 计算并输出图片像素的颜色均值，并输出

示例代码：<https://byshawngithubio.github.io/infovis/datavis2026/03-Image.zip>
